Rectimat 2 capacitor bank

## Protection of capacitors

It is necessary to take into account:

- permissible variations in the fundamental voltage and in harmonic content  
The increase in the current rating for the protection device may reach 30 %.
- variations due to capacitor tolerances.

The increase in the current rating for the protection device may reach 15 % (but only 5 % for Rectiphase capacitors).

Given the above, the generally required correction factor ranges from 1.6 to 2.

For Rectiphase capacitor banks, an optimised factor of only 1.4 may be used for standard banks.

## Protection table for fixed or automatic capacitor banks
