TeSys motor starters - open version
TeSys U starter-controllers

TeSys U starter-controller

Presentation

The TeSys U starter-controller is a D.O.L. starter *(1)* which performs the following functions:
■ Protection and control of single-phase or 3-phase motors:
□ isolation and breaking function,
□ overload and short-circuit protection,
□ thermal overload protection,
□ power switching.
■ Control of the application:
□ protection function alarms, application monitoring (running time, number of faults, motor current values, ...),
□ logs (last 5 faults saved, together with motor parameter values).

These functions can be added by selecting control units and function modules which simply clip into the power base.
This late customisation is even possible after power and control circuit wiring has been completed.

TeSys U is a flexible range that meets the current and future needs of system builders, panel builders and machine manufacturers, as well as those of additional systems.

From design through to operation, TeSys U offers many advantages and simplifies the selection of components in comparison with a traditional solution.
- the breaking, isolation and contactor functions are incorporated in a single block; this means fewer references to be ordered and easy selection without any risk of error, because a single reference covers all needs up to 15 Kw.
- the control unit has a wide setting range. It can operate on a d.c. or a.c. supply. The number of references required is divided by 10, compared with traditional solutions.

The compact components in the TeSys U range are mounted on a single rail, so optimising the amount of space required in enclosures. By eliminating power wiring between the circuit-breaker and contactor, TeSys U reduces installation times in enclosures.
Setting-up accessories simplify or completely eliminate wiring between components and eliminate the risk of errors.

Starter-controller

Consists of a power base and a control unit.

Power bases 1

The power base is independent of the control voltage.
It is available from 0 to 15 kW at 400 V.
It incorporates the breaking function with a breaking capacity of 50 kA at 400V, total coordination (continuity of service) and the switching function.
■ 2 ratings are available: 0…12 A and 0…32 A.
■ Non-reversing (LUB) and reversing (LU2B).
Control units 2

These must be selected according to the control voltage, the power of the motor to be protected and the type of protection required.
■ **Standard control unit (LUCA)**: satisfies the basic protection requirements for motor starters: overload and short-circuit.
■ **Magnetic control unit (LUCL)**: when fitted upstream of a variable speed drive or soft start-soft stop unit and used in conjunction with an LUB 12 or LUB 32 power base, this unit provides isolation and short-circuit protection of the motor starter.
■ **Advanced control unit (LUCB, LUCC or LUCD)**: allows additional advanced functions such as alarm, fault differentiation,...
■ **Multifunction control unit (LUCM)**: suitable for the most sophisticated control and protection requirements.

The control units are interchangeable without rewiring and without using tools.
They have a wide range of adjustment (range of 4) and low heat dissipation, due to the fact that bimetallic overload protection components are no longer used.

(1) For use with resistive and inductive loads. Control of d.c. or capacitive loads is not possible.

Schneider Electric
Control options
Function modules can be used to increase the functions of the starter-controller.

Function modules 3
Must be used in conjunction with advanced control units.
4 types are available:
■ Thermal overload alarm (LUF W10).
■ Thermal fault and manual reset (LUF DH11).
■ Thermal fault and automatic or remote reset (LUF DA01 and LUF DA10).
■ Indication of motor load (LUF V2), which can also be used in conjunction with the multifunction control unit.

All alarm and fault information processed by these modules is available on digital contacts.

Communication modules 3
The information processed is exchanged:
■ Via a parallel bus:
□ parallel wiring module (LUF C00).

■ Via a serial bus:
□ AS-Interface modules (ASILUF C5 and ASILUF C51),
□ Profibus DP module (LUL C07),
□ CANopen module (LUL C08),
□ DeviceNet module (LUL C09),
□ Advantys STB module (LUL C15).
□ Modbus modules (LUL C031 and LUL C033).

They must be used in conjunction with a ⎓ **24 V control unit and require a ⎓ 24 V supply voltage**.
Connection to other protocols, such as Fipio, is possible via gateway modules (LUFP) or via the TeSysPort for Ethernet.

Auxiliary contact modules (LUFN) 3
3 possible configurations: 2 N/O, 1 N/O + 1 N/C or 2 N/C.

Auxiliary contacts 4
They provide the following information: fault signalling and rotary knob in "ready" ☼ position.
Power options
Reverser block 5
Allows a non-reversing power base to be converted to reversing operation.
The reverser block (LU2M) is mounted directly beneath the power base without modifying the width of the product (45 mm). The reverser block (LU6M) is mounted separately from the power base when the height available is limited.

Limiter-disconnector LUA LB
This unit is mounted directly on the power base. It allows the breaking capacity to be increased up to 130 kA at 400 V, with a visible break.
Setting-up accessories
Plug-in terminal blocks 6
The control terminal blocks are of the plug-in type, so allowing wiring to be prepared away from the machine or the replacement of products without rewiring.
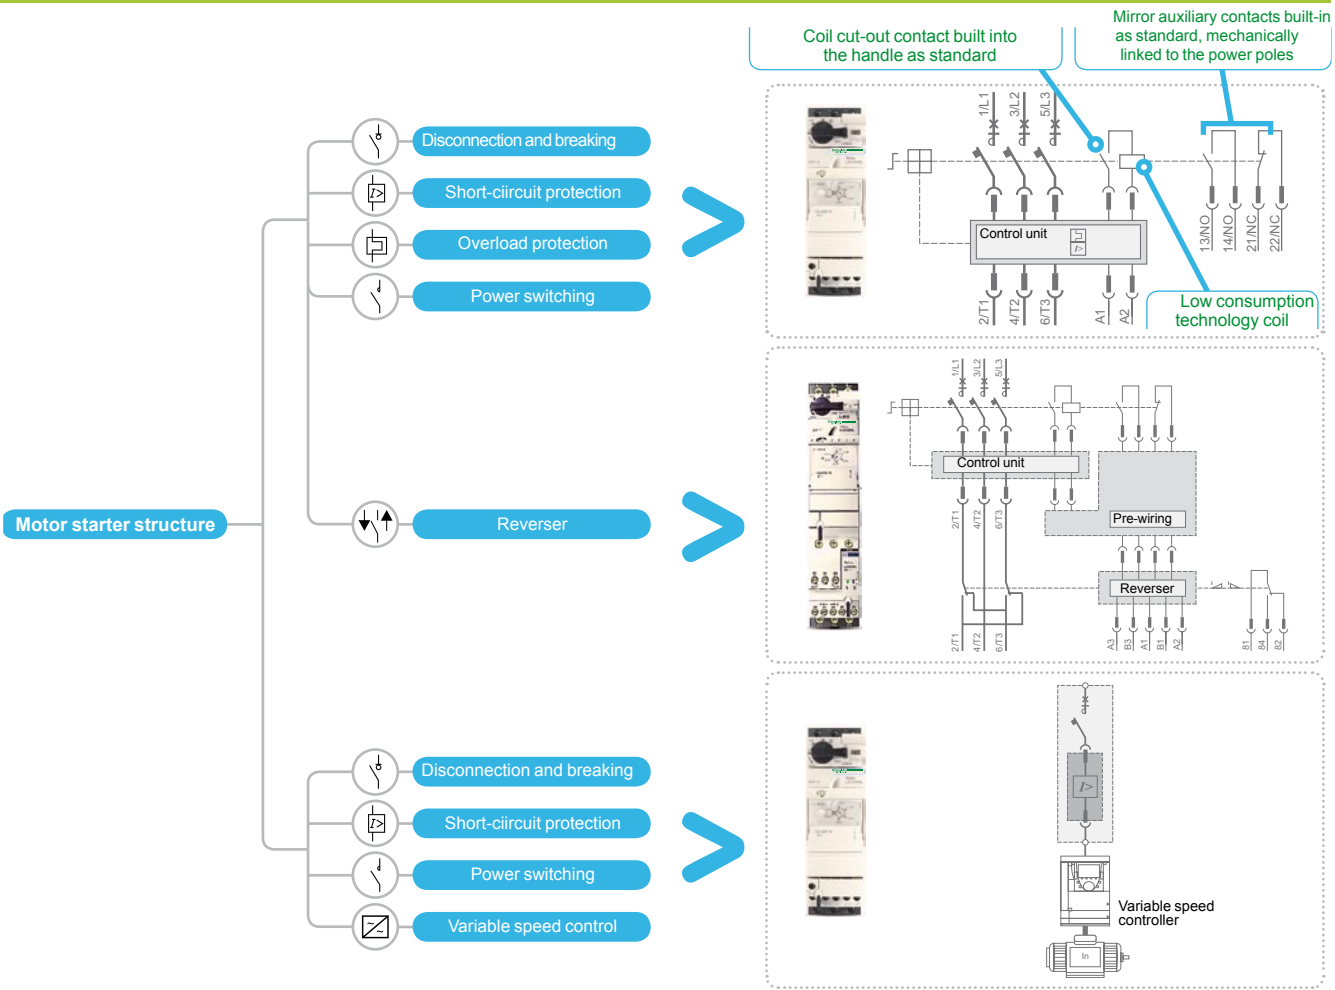

Control circuit pre-wiring system 7
Numerous pre-wired accessories provide simple, clip-in connections, e.g. connection of reverser control terminals, ...

1

Standard control unit

LUCA
*Class 10 - 3-phase
(see page 1/69)*
■ Protection against overloads and short-circuits.
■ Protection against phase failure and phase imbalance.
■ Earth fault protection (equipment protection only).
■ Manual reset.

Magnetic control unit

LUCL
For use with a variable speed controller or a soft start-soft stop unit
(see page 1/134)
■ Short-circuit protection
■ Manual Reset
Motor thermal overload protection must be provided by the variable speed controller or soft starter.

Advanced control unit

LUCB
Class 10 - 3-phase
LUCC
Class 10 - single-phase
LUCD
Class 20 - 3-phase
(see page 1/69)

■ Same functions as the standard control unit
■ In addition, in conjunction with a function module:
□ fault differentiation with manual reset,
□ fault differentiation with remote or automatic reset,
□ thermal overload alarm,
□ indication of motor load.

Multifunction control unit
LUCM
Classes 5 to 30 - single-phase and 3-phase
(see page 1/70)

■ Same functions as the standard control unit
■ In addition, reset parameters can be set to manual or automatic.
■ Protection function alarm.
■ Indication on front panel or on remote terminal via Modbus RS 485 port.
■ "Log" function.
■ "Monitoring" function, indication of main motor parameters on front panel of the control unit, or via a remote terminal
■ Differentiation of thermal overload and magnetic fault.
■ Overload, no-load running.

(1) Communication modules can only be combined with a ⎓ 24 V control unit (LUC● ●● BL).

1

Application
Starting and protection of a pump.

Operating conditions
- Power: 4 kW at 400 V.
- In: 9 A.
- Maximum of 10 class 10 starts per hour.
- Duty class S3.
- 3-wire control:
  □ Start button (S2),
  □ Stop button (S1),
- Control circuit voltage: $\sim$ 230 V.

Products used

Description	Item	Quantity	Reference	Page
Power base 12 A with screw clamp connections	**1**	1	**LUB 12**	1/62
Standard control unit	**2**	1	**LUCA 12FU**	1/69

Functions performed
- Short-circuit protection with level of protection of 50 kA at 400V.
- Total coordination of protection devices conforming to EN 60947-6-2 (continuity of service) in case of a short-circuit.
- Electronic protection against thermal overloads with an adjustment range of 4.
- Load switching (2 million operating cycles in category AC-43 at In).
- Indication of motor status by N/C or N/O contact.
- Interlock between the motor starter control and the position of the rotary knob; not possible to start the motor when the knob is in the OFF position.

Scheme

Schneider Electric

TeSys U starter-controllers

1

510902

2

3
Application
Expansion of an existing installation for improved control of its operation.

Operating conditions
Monitor the status of the motor and obtain alarm signalling by a digital contact in order to improve operation of the pump and anticipate a complete stoppage due to thermal overload.

Additional products used

Description	Item	Quantity	Reference	Page
Replace the standard control unit with an advanced control unit and insert a thermal overload alarm function module.				
Advanced control unit	**2**	1	**LUCB 12FU**	1/69
Alarm function module	**3**	1	**LUF W10**	1/71

Functions performed
■ Alarm information is generated by the advanced control unit and is processed by the thermal overload alarm function module to make it usable.
■ The advanced control unit includes a thermal trip Test button on its front panel.

Scheme
Other versions The advanced control unit can provide other functions, depending on the type of function modules used (instead of the LUF W module described above):
- thermal fault signalling with function modules LUF DA01, LUF DA10 or LUF DH11,
- indication of motor load with function module LUF V2. This module delivers a 4-20 mA analogue signal, which is proportional to the average 3-phase current drawn by the motor. This allows the load current to be monitored and provides access to other application functions using this value, or to predictive or preventive maintenance possibilities (replacement of the motor before it breaks down).

1
Application

Manual control of a 2-position turntable.

Operating conditions

- Power: 2.2 kW at 400 V.
- In: 6 A.
- 30 starts per hour
- Duty class S4.
- 3-wire control:
  □ Pushbutton for Position 1 (S1),
  □ Pushbutton for Position 2 (S2),
  □ Stop button (S5),
- Stopping at the positions is achieved by limit switches S3 and S4.
- Control circuit voltage: $\sim$ 115 V.

Products used

| Description	Item	Quantity	Reference	Page
Power base, reversing, 12 A with screw clamp connections	**1**	1	**LU2B 12FU**	1/63
Standard control unit	**2**	1	**LUCA 12FU**	1/69

Functions performed

- Short-circuit protection with level of protection of 50 kA at 400V.
- Total coordination of protection devices conforming to EN 60947-6-2 (continuity of service) in case of a short-circuit.
- Electronic protection against thermal overloads with an adjustment range of 4.
- Load switching (2 million operating cycles in category AC-43 at In).
- Interlock between the motor starter control and the position of the rotary knob; not possible to start the motor when the knob is in the OFF position.

Electrical interlocking is ensured by pre-wired connector LU9M R1C included on base LU2B 12. The design of the reversing power block makes mechanical interlocking unnecessary.

Scheme (manual control)

Schneider Electric

TeSys motor starters - open version
TeSys U starter-controllers

Application

Monitoring operation of a surface pump in a water treatment plant to avoid dry running, which could lead to destruction of the pump.

Operating conditions

■ Power: 15 kW at 400 V.
■ In: 28.5 A.
■ Duty class S1.
■ Control circuit voltage: ⎓ 24 V.
■ Control-command by PLC and serial link using the Modbus protocol.

Products used

Description	Item	Quantity	Reference	Page
Power base 32 A without connections	**1**	1	**LUB 320**	1/62
Multifunction control unit	**2**	1	**LUCM 32BL**	1/70
Modbus communication module	**3**	1	**LUL C033**	1/93
Pre-wired coil connection Connection of communication module output terminals to the coil terminals	**4**	1	**LU9B N11C**	1/93
Connection cable for connecting the communication module to the serial bus	–	1	**VW3 A8 306 R●●**	1/93
T-junction	–	1	**VW3 A8 306 TF03**	1/93

Functions performed
■ Short-circuit protection with level of protection of 50 kA at 400V.
■ Total coordination of protection devices conforming to EN 60947-6-2 (continuity of service) in case of a short-circuit.
■ Electronic protection against thermal overloads with an adjustment range of 4.
■ Load switching (1.5 million operating cycles in category AC-43 at In).
■ Measurement of load current and detection of no-load running by the multifunction control unit.
■ Interlock between the motor starter control and the position of the rotary knob; not possible to start the motor when the knob is in the OFF position.
■ No-load running or operation under load. To use this function, the following parameters must be entered:
□ trip: the answer yes/no enables or disables the function,
□ time before tripping: the time period during which the value of the current must be below the tripping threshold in order to cause tripping (adjustable from 1 to 200 s),
□ tripping threshold: value as a % of the load current ratio in relation to the setting current. If the ratio remains below this threshold for the time specified in the previous parameter, the product trips (adjustable from 30 to 100 %).
■ Indication of the various motor starter statuses and currents.

Modbus profile IEC 64915

(1) The rated peak current for power sockets AK5 PC●● is 6 kA.
When used in association with power bases LUB●●, the prospective short-circuit current must not exceed 7 kA.
(2) Supplied with limiter cartridge.
(3) These devices make it possible to increase the breaking capacity of the power base.
(4) Sold in lots of 100.
(5) The limiter must be mounted on an LUB or LU2B power base. The limiter can therefore not be common to several motor starters.

Phase barrier

Phase barrier LU9 SP0 must be used:
■ To build a UL 508 **type E** certified starter (Self Protected Starter).
Without the phase barrier, the starter-controller is certified UL 508.
■ If the starter-controller is to be used on an operational voltage of 690 V.

XBT NU400

Description

1 Extraction and locking handle
2 Built-in display window (2 lines, 12 characters)
3 4-button keypad
4 ⎓ 24 V auxiliary power supply
5 Modbus RS485 communication port. Connection by RJ45 connector.
6 Sealing of locking handle

The display window **2** and keypad **3** allow:
■ in configuration mode: local configuration of protection functions and alarms,
■ in run mode: display of parameter values and events.
The Modbus communication port **5** is used to connect:
■ an operator terminal,
■ a PC,
■ a Personal Digital Assistant (PDA).

Multifunction control units

Parameter entry, monitoring of parameter values and consultation of logs are carried out:
■ either on the front panel, using the built-in display window/keypad,
■ or via an operator terminal,
■ or via a PC or a PDA with PowerSuite software,
■ or remotely, via a Modbus communication bus.
Programming of the product via the keypad requires a ⎓ 24 V auxiliary power supply.

Maximum standard power ratings of 3-phase motors 50/60 Hz			Setting range	Clip-in mounting on power base Rating	Reference (1)	Weight

Thermal overload signalling and manual reset

Module LUF DH11 makes it possible to differentiate thermal overload and short-circuit faults. (The short-circuit fault can then be signalled via add-on contact blocks LUA1 C). The module includes two contacts for thermal overload signalling, as well as an LED on the front panel.
To reset the motor starter, the operator must use the rotary knob on the power base. The module can only be used with an advanced control unit and requires an ∿/⎓ 24…240 V external power supply.

1 N/O + 1 N/C	**3**	∿ or ⎓ 24…250 V	**LUF DH11**	0.060

Thermal overload signalling and automatic or remote reset

These modules make it possible to differentiate thermal overload and short-circuit faults. (The short-circuit fault can then be signalled via add-on contact blocks LUA1 C).
The modules include one contact for thermal overload signalling, as well as an LED on the front panel. A second contact (terminals Z1-Z2) must be wired in series with terminal A1 of the motor starter. In the event of a thermal overload fault, this wiring allows motor control to be switched off. The rotary knob on the power base will then stay in the "ready position" ⟳ .
Resetting of the motor starter is automatic after the required motor cooling time if terminals X1-X2 are linked by a strap, or remote by pulsed closing of a volt-free contact connected to terminals X1-X2.

These modules can only be used with an advanced control unit and require an ∿/⎓ 24…240 V external power supply.

Note: Terminals X1-X2 are not isolated from the signalling module power supply.
For remote resetting, use a volt-free contact specific to each module to be reset.

1 N/C	**4**	∿ or ⎓ 24…250 V	**LUF DA01**	0.055
1 N/O	**4**	∿ or ⎓ 24…250 V	**LUF DA10**	0.055

Thermal overload alarm

Through load shedding, this module makes it possible to avoid stoppages in operation due to overload tripping.
Imminent thermal overload tripping is displayed as soon as the thermal state exceeds the threshold of 105 % (hysteresis = 5 %).
Signalling is possible via an LED on the front panel of the module and externally by an N/O relay output.
It can only be used with an advanced control unit, from which it takes its power.

1 N/O	**1**	∿ or ⎓ 24…250 V	**LUF W10**	0.055

Indication of motor load

This module provides a signal which is representative of the motor load status (I average/Ir).
■ I average = average value of the rms currents in the 3 phases,
■ Ir = value of the setting current.
The value of the signal (4-20 mA) corresponds to a load status of 0 to 200 % (0 to 300 % for a single-phase load).
It can be used with an advanced or multifunction control unit.
Module LUF V2 requires a ⎓ 24 V external power supply.

PowerSuite screen on PC

*PowerSuite screen on PC
View of PI regulator function parameters*

View of the FTT oscilloscope
Presentation

The PowerSuite software workshop for PC is a user-friendly tool designed for setting up the Schneider Electric control device motors:
■ TeSys U starter-controllers
■ TeSys T motor management systems
■ Altistart soft start/soft stop units
■ Altivar variable speed drives
■ Lexium 05 servo drives

It includes various functions designed for setup phases such as:
■ Preparing configurations
■ Start-up
■ Maintenance
To facilitate start-up and maintenance, the PowerSuite software workshop is compatible with the Bluetooth® wireless link.

Functions *(1)*

Preparing configurations

The PowerSuite software workshop can be used on its own to generate the device configuration, which can be saved, printed and exported to office automation software.

The PowerSuite software workshop can also be used to convert an Altivar 58 or Altivar 58F drive configuration into one that is compatible with an Altivar 71.

Start-up

When the PC is connected to the device, the PowerSuite software workshop can be used to:
■ Transfer the generated configuration
■ Adjust
■ Monitor. This option has been enhanced with new functions such as:
□ The oscilloscope
□ The high-speed oscilloscope (minimum time base: 2 ms)
□ The FFT *(Fast Fourier Transform)* oscilloscope
□ Display of communication parameters
■ Control
■ Save the final configuration

Maintenance

To facilitate maintenance operations, the PowerSuite software workshop can be used to:
■ Compare the configuration of a device currently being used with a saved configuration
■ Manage the user's installed equipment base, in particular:
□ Organize the installed base into folders (electrical equipment, machinery, workshops, etc.)
□ Store maintenance messages
□ Facilitate Modbus TCP connection by storing the IP address

User interface

The PowerSuite software workshop can be used to:
■ Present the device parameters (arranged by function) in the form of illustrated views of diagrams or simple tables
■ Customize the parameter names
■ Create:
□ A user menu (choice of particular parameters)
□ Monitoring control panels with graphic elements (cursors, gauges, bar charts)
■ Perform sort operations on the parameters
■ Display text in five languages (English, French, German, Italian and Spanish). The language changes immediately and there is no need to restart the program.
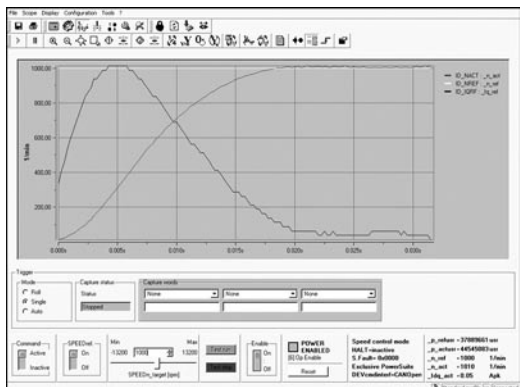

It also features online contextual help:
■ On the PowerSuite tool
■ On the device functions by direct access to the user manuals

(1) Certain functions are not available for all devices. See the table of available functions, page 1/73.
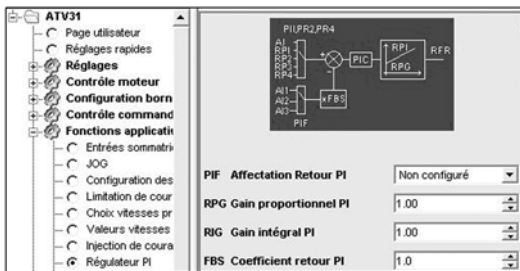

**Schneider
Electric**

Modbus TCP connection

Connections *(1)*

Modbus serial link

The PowerSuite software workshop can be connected directly to the device terminal port or Modbus network port via the serial port on the PC.

Two types of connection are possible:
■ With a single device (point-to-point connection), use a VW3 A8 106 PC serial port connection kit.
■ With a number of devices (multidrop connection), use the XGS Z24 interface.

### Modbus TCP communication network

The PowerSuite software workshop can be connected to a Modbus TCP network. In this case, the devices can be accessed:
■ Using a VW3 A3 310 communication card for the Altivar 61and 71 drives
■ Using a TSX ETG 100 Modbus TCP/Modbus gateway

Bluetooth® wireless link

The PowerSuite software workshop can communicate via a Bluetooth® radio link if the device is equipped with a Bluetooth® Modbus VW3 A8 114. The adapter plugs into the device connector terminal port or Modbus network port and has a range of 10 m (class 2).

If the PC does not feature Bluetooth® technology, use the VW3 A8 115 USB - Bluetooth® adapter.
Remote maintenance

A simple Modbus TCP connection is all that is required for the PowerSuite software workshop to support remote monitoring and diagnostics.
When devices are not connected to the Modbus TCP network, or it is not directly accessible, various remote transmission solutions may be used instead (modem, teleprocessing gateway, etc.). Please consult your Regional Sales Office.

(1) Please refer to the compatibility table on page 1/75.
(2) Please refer to our specialist "Automation platform Modicon Premium and Unity - PL7 software" and "Automation platform Modicon M340" catalogues.

11   Parallel wiring module (LUF C00)
12   Options: add-on contact blocks, reverser blocks

Presentation

The parallel wiring system makes it possible to connect starter-controllers to the PLC I/O modules quickly and without any need for tools. It replaces traditional screw terminal and single wire connections. It is used with the Telefast pre-wired system *(1)*.

The parallel wiring module provides the status and command information for each starter-controller. It must be used with an LUB 12 or LU2B A0BL power base and a ⎓ 24 V control unit LUC● ●●BL.

Splitter boxes LU9 G02 and LU9 G03 distribute information from the PLC I/O modules to each of the starter-controllers connected to it.

Splitter box LU9 G02 (maximum of 4 reversing starters) is optimised for use with card TSX DMZ28DTK and splitter box LU9 G03 (maximum of 8 reversing starters) for use with cards TSX DMZ64DTK and BMX DDM3202K.

When used in conjunction with the Advantys STB distributed I/O solution, the TeSys U starter-controller is ideal in decentralised automation architectures *(2)*. The use of dedicated parallel interface module STB EPI 2145 allows remote connection of 4 starter-controllers.

Parallel wiring module LUF C00 has:
■ 2 outputs: control of starter forward and reverse running,
■ 3 inputs: position of the rotary knob, fault indication and position of the poles.

Each of the channels of LU9 G0● splitter boxes has:
■ 2 outputs: control of starter forward and reverse running, in the case of a reversing starter.
■ 2 inputs: fault indication and position of poles.

Connection to the dedicated module is by means of the following cables:
■ RJ45 LU9R●●, for lengths less than 3 metres,
■ 490 NTW 000●●, for lengths greater than 3 metres.

AS-Interface communication modules
1 Green LED: AS-Interface voltage present
2 Red LED: AS-Interface or module fault
3 Outputs for starter commands
4 Black connector for connection to 24 V auxiliary power supply
5 Yellow connector for connection to the AS-Interface system

Presentation

AS-Interface communication modules ASILUF C5 and ASILUF C51 make it easy to connect starter-controllers to the AS-Interface cabling system, and therefore allow remote control and command of these starter-controllers.

Module ASILUF C51 features extended addresing.

The various operating states of the modules (AS-Interface voltage present, communication fault, addressing fault,…) are indicated on the front panel by a green LED **1** and a red LED **2**.

Operation of the modules is continuously monitored by auto-testing, in a way that is totally transparent to the user.

The incorporation of AS-Interface V.2.1 functions allows diagnostics to be performed on the modules, either remotely via the line or locally via the ASI TERV2 addressing terminal.

The communication modules must be connected to a 24 V auxiliary supply and must be used in conjunction with a 24 V control unit, LUC● ●●BL.
The product is supplied with a yellow connector **4** for connection to the AS-Interface system, a black connector **5** for connection to the 24 V auxiliary supply and a black connector **3** for connection of the outputs.

Presentation

When used in conjunction with the power base and control unit, communication module LULC07 allows TeSys U starter-controllers to be controlled via Profibus DP (Deported Periphery).
Communication module LULC07 is of the slave type and uses the TeSys U system's internal registers (which can be accessed via the Profibus DP bus) in cyclic or acyclic mode. This module has a 24 V (0.5 A) discrete output and two configurable discrete inputs.

Connections
Serial bus topology
11 Programmable controller with Profibus DP master card

18 Profibus DP communication module (LUL C07)

Profibus DP: general information

The TeSys U communication module supports 2 Profibus application profiles based on DP V0 and DP V1 services: motor starter (MS), motor management starter (MMS).

Cyclic / Acyclic services

In general, data is exchanged via cyclic services and via acyclic services.
The application profiles define, for the cyclic data:
■ manufacturer independent data,
■ manufacturer specific data.

DP V1 Read / Write services

DP V1 read and write services allow access to all data that cannot be accessed by cyclic data exchange.

PKW feature

In order to make data which is not cyclically exchanged accessible for DP V0 masters, a function called PKW (Periodically Kept in acyclic Words) is implemented. The cyclic data carries a dedicated zone of 4 input words and 4 output words, called PKW, which makes it possible to access all the registers "en bloc".

Electronic device description

The TeSys U system is described by a GS*- file *(1)*. This file will be used by any Profibus configuration tool to get information about the device.
The GS*- files and associated icon, dedicated to the TeSys U system, can be downloaded from the "www.schneider-electric.com" website (Library / Software Tools).

Presentation

Communication module LUL C08 allows direct connection of TeSys U starter-controllers and controllers on a CANopen bus.
Module LUL C08 is of the slave type.

When used in conjunction with an LUC ●●●BL or LUC ●T1BL control unit, module LUL C08 provides control and command of the starter-controller and of the controller.

For local control requirements, the module is equipped with a configurable, 24 V. 0.5 V discrete output and two configurable discrete inputs.

LUL C08 communication modules can be connected to Advantys STB module : XBE 2100K.

Connections

Star topology

Bus topology
Connection of power supplies

The 24 V power supply for modules LUL C08 is distributed via the bus and must be connected to the first TSX CANTDM4 junction box. The cable c.s.a. allows connection of up to 25 LUL C08 modules .
Above this number, another power supply must be connected to the next junction box.

A 24 V supply must be connected to module LUL C08 for outputs OA1, OA3 and LO1.

Presentation

When used in conjunction with the power base and control unit, communication module LUL C09 allows TeSys U starter-controllers and controllers to be controlled via DeviceNet.
Communication module LUL C09 is of the slave type and uses the TeSys U system's internal registers which can be accessed via DeviceNet.
Module LUL C09 has a configurable 24 V (0.5 A) discrete output and two configurable discrete inputs.

Description	Item	Reference	Weight kg
DeviceNet communication module	**14**	**LUL C09**	0.108

Connection of communication module output terminals to the coil terminals
By pre-wired connector or wire link.
■ Pre-wired connector: pre-wired coil connection
The use of a power base without pre-wired control circuit connections is recommended.

Description	For use with power base	Reference	Weight kg
Pre-wired coil connection	LUB ●●	**LU9B N11L**	0.050
	LU2B ●●●●	**LU9M RL**	0.450

■ **Wire link:**
Allows insertion, for example, of an emergency Stop control or a voltage interface. This type of connection must be used for a reversing starter-controller assembled using an LU6M reverser block.
When this reverser block and the power base are mounted side-by-side, a pre-wired coil connection LU9M RL may be used.

Supply
The 24 V supply to DeviceNet LUL C09 modules is provided via the (V+ , V-) terminals.
The 24 V supply for the inputs/outputs must be provided separately from the supply to the LUL C09 modules.
The 24 V Aux terminal is for supply to the LUCM control unit or the LUTM controller.

Presentation

Communication module LUL C15 allows direct connection of TeSys U starter-controllers and controllers on an Advantys STB island, between two segments or at the end of a segment. In the latter case, the segment must be equipped with an EOS (End of segment) extension module STB XBE1100.

The starter-controller will then be able to make use of the services provided by Advantys STB: self-addressing, autobaud, fallback positions.

When used in conjunction with an LUC ●●BL or LUC ●T1BL control unit, module LUL C15 provides control and command of the starter-controller and of the controller. For local control requirements, the module is equipped with a configurable, --- 24 V, 0.5 A discrete output and two configurable discrete inputs.
Connections

10 Advantys STB island (NIM: Network Interface Module + I/O modules).
11 Extension module (EOS/End of segment) STB XBE1100.
12 Bus connecting cable LU9 RCD●●, elbowed/straight, for connection of the first TeSys U communication module.
13 Starter-controller.
14 Communication module LUL C15.
15 Connector for connection of product either by wire link or using coil connection modules LU9 BN11L or LU9 MRL.
16 Line end adapter LU9 RFL15.
17 Bus connection cable LU9 RDD●●, straight/straight, for connections between LUL C15 modules.
18 Beginning of segment (BOS).

Connection of power supply for the outputs

A --- 24 V supply must be connected to module LUL C15 for outputs OA1, OA3 and LO1.

Presentation

Communication gateways LUF P allow connection between the Modbus serial link and Fipio, Profibus DP or DeviceNet field buses.

After configuration, these gateways manage information which can be accessed by the Modbus serial link and make this information available for read/write functions (command, monitoring, configuration and adjustment) on the field buses.

An LUF P communication gateway consists of a box which can be clipped onto a 35 mm omega rail, allowing connection of up to 8 Slaves connected on the Modbus serial link.

Characteristics

TeSys motor starters - open version
TeSys U starter-controllers
Reversing power bases and auxiliary contacts

1

Specific characteristics of power bases LU2B and reverser blocks LU2M or LU6M

Duration of inrush phase	∼ 50/60 Hz	ms	25
	---	ms	15
Maximum operating time	Without change of direction	ms	75
	With change of direction	ms	150

General characteristics of auxiliary contacts

Conventional thermal current (Ith)	For ambient temperature θ < 70 °C	A	5
Frequency of the operational current		Hz	Up to 400
Minimum switching capacity λ = 10⁻⁸	U min	V	17
	I min	mA	5
Short-circuit protection	Conforming to IEC/EN 60947-5-1	A	gG fuse: 4
Short-time rating	Permissible for	1 s	A	30
		500 ms	A	40
		100 ms	A	50
Insulation resistance		mΩ	10
Non-overlap time	Guaranteed between N/C and N/O contacts	ms	2 (on energisation and on de-energisation)

Specific characteristics of auxiliary contacts built-into the power base

Linked contacts	Conforming to IEC/EN 60947-4-1		Each power base has 1 N/O contact and 1 N/C contact which are mechanically linked
Mirror contact	Conforming to IEC/EN 60947-1		The N/C contact fitted in each power base reliably represents the state of the power contacts (safety scheme)
Rated operational voltage (Ue)		V	Up to ∼ 690; --- 250
Rated insulation voltage (Ui)	Conforming to IEC/EN 60947-5-1	V	690
	Conforming to UL, CSA	V	600

Specific characteristics of auxiliary contacts in modules LUF N, of auxiliary contacts LUA1 and of reverser blocks LU2M and LU6M

Rated operational voltage (Ue)		V	Up to ∼ 250; --- 250
Rated insulation voltage (Ui)	Conforming to IEC/EN60947-5-1	V	250
	Conforming to UL, CSA	V	250

Rated operational power of contacts
Conforming to IEC/EN 60947-5-1

a.c. supply, categories AC-14 and AC-15
Electrical durability (valid for up to 3600 operating cycles/hour) on an inductive load such as the coil of an electromagnet: making current (cos φ 0.7) = 10 times the power broken (cos φ = 0.4)

	V	24	48	115	230	400	440	600
1 million operating cycles	VA	60	120	280	560	960	1050	1440
3 million operating cycles	VA	16	32	80	160	280	300	420
10 million operating cycles	VA	4	8	20	40	70	80	100

d.c. supply, category DC-13
Electrical durability (valid for up to 1200 operating cycles/hour) on an inductive load such as the coil of an electromagnet, without economy resistor, the time constant increasing with the load.

	V	24	48	125	250
1 million operating cycles	W	120	90	75	68
3 million operating cycles	W	70	50	38	33
10 million operating cycles	W	25	18	14	12

	Protection against phase imbalance		Yes	–	Yes
Short-circuit protection	Tripping threshold		14.2 x Ir max.	14.2 x Ir max.	14.2 x Ir max.
	Tripping tolerance		± 20 %	± 20 %	± 20 %

Characteristics of multifunction control units LUCM

Protection	Motor type		Parameters can be set: single-phase or 3-phase
	Conforming to standard		IEC/EN 60947-6-2, UL 508
Overload protection	Tripping class conforming to UL 508, IEC/EN 60947-6-2		5, 10, 15, 20, 25, 30 (selectable)
	Frequency limits of the operational current	**Hz**	50…60
	Temperature compensation	**°C**	- 25…+ 55
Communication interface for terminal on enclosure door	Physical interface		RS 485 multi-drop
	Connections		RJ45 on front panel
	Protocol		Modbus RTU
	Maximum transmission speed	**bit/s**	19 200 (self-configuration up to this value)
	Maximum return time	**ms**	200
Display	Type		LCD, 2 lines of 12 characters
	Language version		Multilanguage (English, French, German, Italian, Spanish)
	Precision		± 5 %
	Resolution		1 % of Ir
Auxiliary supply	External type	**V**	⎓ 24, with maximum ripple of ± 10 %.
	Heat dissipation	**W**	0.8

Configuration table for protection devices and alarms on multifunction control units LUCM

	Tripping	Alarm	Adjustment of tripping threshold		Adjustment of time before tripping		Adjustment of alarm threshold	
	Factory setting	Factory setting	Range	Default value	Range	Default value	Range	Default value
Overcurrent	Activated *(1)*	–	3…17 Ir	14.2	–	–	–	–
Overload	Activated *(1)*	Activated	0.5…32 A *(2)*	Ir min	Class: 5…30	5	10…100 % of the thermal state	85 %
Earth fault	Activated	Activated	0.2…5 Ir min	0.3 Ir min	0.1…1.2 s	0.1 s	0.2…5 Ir min	0.3 Ir min
Phase imbalance	Activated	Activated	10…30 %	10 %	0.2…20 s	5 s	10…30 %	10 %
Torque limitation	Deactivated	Deactivated	1…8 Ir	2 Ir	1…30 s	5 s	1…8 Ir	2 Ir
No-load running	Deactivated	Deactivated	0.3…1 Ir	0.5 Ir	1…200 s	10 s	0.3…1 Ir	0.5 Ir
Long starting time	Deactivated	Deactivated	1…8 Ir	Ir	1…200 s	10 s	1…8 Ir	Ir

Configuration of additional functions on multifunction control units LUCM

	Factory setting	Setting range
Reset	Manual	Manual, automatic or remote
Time before reset	120 s	1…1000 s
Type of load	3-phase motor	3-phase motor, single-phase motor
	Self-cooled	Self-cooled, force cooled
Language	English	English, French, German, Italian, Spanish
Display	Average current	Average current, thermal state of motor, current in phase 1 / 2 / 3, earth leakage current, phase imbalance, cause of last 5 faults

(1) This function cannot be deactivated.
(2) The setting range depends on the rating of the control unit used.

Function modules and communication modules

1

Characteristics of motor load indication function module LUF V2

Analogue output			4 - 20 mA
Signal delivered			Value of I average/Ir ratio within the range of 0 to 2 for LUCB and LUCD
			Value of I average/Ir ratio within the range of 0 to 3 for LUCC
Load impedance	Minimum	kΩ	–
	Maximum	Ω	500
	Typical	Ω	100
Signal characteristics with advanced control unit	Precision		± 6 %
Signal characteristics with multifunction control unit	Precision		± 10 %
	Resolution		1 % of Ir
Supply			External ⎓ 24 V

Characteristics of AS-Interface communication modules ASILUF C5 and ASILUF C51

Module type			ASILUF C5	ASILUF C51
Product certification			AS-Interface V2.1 n° 52901	AS-Interface V2.1 n° 52303
AS-Interface profile			7.D.F.0	7.A.7.E
Ambient air temperature		°C	Operation - 25…+ 70	
Cycle time		ms	5	10
Addressing			31 slaves	62 slaves
AS-Interface supply		V	29.5...31.5	
Current consumption	On the AS-Interface bus	mA	Normal operation: 25	
		mA	Fault condition: 30	
	On 24 V supply for the outputs	mA	200	
Auxiliary supply		V	⎓ 24 ± 30 %	
Number of outputs			2 dedicated to starter-controller coil operation	
Switching capacity of the solid state outputs			0.5 A/24 V (outputs protected against short-circuits)	
Indication/diagnostics			By 2 LEDs on front panel	

Characteristics of Modbus communication module LUL C03●

Module type			LUL C031	LUL C033
Physical interface			RS 485 multi-drop	
Connections			RJ45 on front panel	
Protocol			Modbus RTU	
Maximum transmission speed		bit/s	19 200 (self-configuration up to this value)	
Maximum return time		ms	30	
Addressing			By switches: from 0...31	
Ambient air temperature		°C	Operation - 25…+ 55	
Discrete inputs	Number		–	2 (to be assigned according to the configuration)
	Supply	V	–	⎓ 24
	Input current	mA	–	7
Nominal input values	Voltage	V	⎓ 24 (positive logic)	
	Current	mA	7	
Response time	Change to state 1	ms	10 (± 30 %)	
	Change to state 0	ms	10 (± 30 %)	
Input type			Resistive	
Solid state outputs	Number		3, of which 2 dedicated to starter-controller coil operation	
	Supply	V	⎓ 24	
	Max. current	mA	500	
Protection	gI fuse	A	1	
Switching capacity			0.5 A/24 V	
Indication/diagnostics			By 3 LEDs on front panel

Presentation

The Altistart U01 is a soft start/soft stop unit for asynchronous motors. It is designed primarily for combinations with **TeSys U** starter-controllers.

When combined with a **TeSys U 1** controller by means of a connector **2**, the Altistart U01 **3** is a power option which provides the "Soft start/soft stop" function. The result is a unique, innovative motor starter.

Using the Altistart U01 starter enhances the starting performance of asynchronous motors by allowing them to start gradually, smoothly and in a controlled manner. It prevents mechanical shocks, which lead to wear and tear, and limits the amount of maintenance work and production downtime.
The Altistart U01 limits the starting torque and current peaks on starting, on machines which do not require a high starting torque.

The Altistart U01 is designed for the following simple applications:
■ Conveyors
■ Conveyor belts
■ Pumps
■ Fans
■ Compressors
■ Automatic doors and gates
■ Small cranes
■ Belt-driven machines, etc.

The Altistart U01 is compact and easy to install. It complies with standards IEC/EN 60947-4-2, carries UL, CSA, C-Tick, CCC certifications and CE marking.

■ **ATSU 01N2●●LT soft start/soft stop units**
□ Control two phases of the motor power supply to limit the starting current and for deceleration
□ Internal bypass relay
□ Motor power ratings ranging from 0.75 kW to 15 kW
□ Motor supply voltages ranging from 200 V to 480 V, 50/60 Hz.
An external power supply is required for controlling the starter.

Description

■ Altistart U01 soft start/soft stop units are equipped with:
□ A potentiometer for setting the starting time **6**
□ A potentiometer for setting the deceleration time **8**
□ A potentiometer for adjusting the start voltage threshold according to the motor load **7**
□ 1 green LED **4** to indicate that the unit is switched on
□ 1 yellow LED **5** **to indicate that the motor is powered at nominal voltage, if it is connected to the starter**
□ A connector **9**:
   - 2 logic inputs for Run/Stop commands
   - 1 logic input for the BOOST function
   - 1 logic output to indicate the end of starting
   - 1 relay output to indicate the starter has a power supply fault or the motor has reached a standstill at the end of the deceleration stage

Description of a TeSys U starter-controller

Please consult the "TeSys U starters - open version" catalogue.

## ATSU 01N2●●●LT soft start unit functions

■ 2-wire control
The run and stop commands are controlled by a single logic input. State 1 of logic input LI2 controls starting and state 0 controls stopping.

Wiring diagram for 2-wire control

■ 3-wire control
The run and stop commands are controlled by 2 different logic inputs.
Stopping is achieved when logic input LI1 opens (state 0).
The pulse on input LI2 is stored until input LI1 opens.
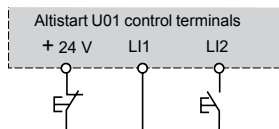

Wiring diagram for 3-wire control

■ Starting time
Controlling the starting time means that the time of the voltage ramp applied to the motor can be adjusted to obtain a gradual starting time, dependent on the motor load.

■ Voltage boost function via logic input
Activating the BOOST logic input enables the function for supplying a starting overtorque capable of overcoming any mechanical friction.
When the input is at state 1, the function is active (input connected to the + 24 V) and the starter applies a fixed voltage to the motor for a limited time before starting.
Application of a voltage boost equal to 100% of the nominal motor voltage

■ End of starting
□ Application function for logic output LO1
ATSU 01N2●●LT soft start/soft stop units are equipped with an open collector logic output LO, which indicates the end of starting when the motor has reached nominal speed.

Environmental characteristics

Type of starter			ATSU 01N2●●LT
Conformity to standards			Altistart U01 electronic starters have been developed to conform to the strictest international standards and the recommendations relating to electrical industrial control devices (IEC, EN), in particular standard IEC/EN 60947-4-2.
Electromagnetic compatibility EMC			
	Conducted and radiated emissions		CISPR 11 level B, IEC 60947-4-2, level B
	Harmonics		IEC 1000-3-2, IEC 1000-3-4
	EMC immunity		EN 50082-2, EN 50082-1
	Electrostatic discharge		IEC 61000-4-2 level 3
	Immunity to radiated radio-electrical interference		IEC 61000-4-3 level 3
	Immunity to electrical transients		IEC 61000-4-4 level 4
	Voltage/current impulse		IEC 61000-4-5 level 3
	Conducted and radiated emissions		IEC 61000-4-6 level 3
	Immunity to conducted interference caused by radio-electrical fields		IEC 61000-4-11
	Damped oscillating waves		IEC 61000-4-12 level 3
CE marking			The starters carry CE marking in accordance with the European low voltage directives IEC/EN 60947-4-2.
Product certifications			UL, CSA, C-Tick and CCC
Degree of protection			IP 20
Degree of pollution			2 conforming to IEC/EN 60947-4-2
Vibration resistance			1.5 mm peak to peak from 3 to 13 Hz, 1 gn from 13 to 150 Hz, conforming to IEC/EN 60068-2-6
Shock resistance			15 gn for 11 ms conforming to IEC/EN 60068-2-27
Relative humidity			5…95% without condensation or dripping water conforming to IEC 60068-2-3
Ambient temperature around the unit	Storage	°C	- 25…+ 70 conforming to IEC/EN 60947-4-2
	Operation	°C	- 10…+ 40 without derating, up to 50°C with current derating of 2% per °C above 40°C
Maximum operating altitude		m	1000 without derating (above this, derate the current by 2.2% per additional 100 m)
Operating position Maximum permanent angle in relation to the normal vertical mounting position			10° 10°

	2 conductors	mm²	1…6	10 AWG
Tightening torque		N.m	1.9…2.5	
Control circuit			Screw connector	
Flexible wire without cable end	1 conductor	mm²	0.5…2.5	14 AWG
	2 conductors	mm²	0.5…1.5	16 AWG
Flexible wire with cable end	1 conductor	mm²	0.5…1.5	16 AWG
	2 conductors	mm²	0.5…1.5	16 AWG
Rigid wire	1 conductor	mm²	0.5…2.5	14 AWG
	2 conductors	mm²	0.5…1	17 AWG
Tightening torque		N.m	0.5	

Torque characteristics (typical curves)
The diagram opposite shows the torque/speed characteristic of a cage motor in relation to the supply voltage.
The torque varies in line with the square of the voltage at a fixed frequency. The gradual increase in the voltage prevents the instantaneous current peak on power-up.

TeSys motor starters - open version
Magnetic control unit for the protection of
variable speed controllers and soft start units

S1 (mm² / AWG)

S2 (mm² / AWG)   LUB ●●   LUCL●●

Altivar or Altistart

In
Presentation
When installed upstream of a variable speed controller or soft start unit,
control unit LUCL●●, used in conjunction with an LUB 12 or LUB 32 power base,
provides:
□ isolation,
□ short-circuit protection of the motor starter.
(variable speed controller-based or soft start unit-based motor starters).

*Note: control unit LUCL, when used in conjunction with power base LUB 12 or
LUB 32, conforms to standard IEC 60947-2.*

Installation regulations
When the length of the cable between the TeSys U starter and the variable speed
controller is more than 1.5 m, the c.s.a. of the cable between the variable speed
controller and the TeSys U starter (S2) must be equal to the c.s.a. of the cable
upstream of TeSys U (S1).

Maximum operating altitude		**m**	2000
Operating positions	In relation to normal vertical mounting plane		
Flame resistance	Conforming to UL 94		V2
	Conforming to IEC/EN 60695-2-12	**°C**	960 (parts supporting live components)
		°C	650
Environmental restrictions			Cadmium and silicone-free, recyclable
Shock resistance 1/2 sine wave = 11 ms	Conforming to IEC/EN60068-2-27 (1)		Power poles open: 10 gn
			Power poles closed: 15 gn
Vibration resistance 5…300 Hz	Conforming to IEC/EN 60068-2-6 (1)		Power poles open: 2 gn
			Power poles closed: 4 gn (2)
Resistance to electrostatic discharge	Conforming to IEC/EN 61000-4-2	**kV**	In open air: 8 - Level 3
		kV	On contact: 8 - Level 4
Immunity to radiated high-frequency disturbance	Conforming to IEC/EN 61000-4-3	**V/m**	10 - Level 3
Immunity to fast transient currents	Conforming to IEC/EN 61000-4-4	**kV**	All circuits except for serial link: 4 - Level 4
		kV	Serial link: 2 - Level 3
Immunity to dissipated shock waves	Conforming to IEC/EN 60947-2		**Common mode**	**Serial mode**
	Uc ∼ 24…240 V, Uc ⎓ 48…220 V	**kV**	2	1
	Uc = 24 V ⎓		Not applicable	
Immunity to conducted high-frequency disturbance	Conforming to IEC/EN 61000-4-6	**V**	10	

(1) Without modifying the contact states, in the most unfavourable direction.
(2) 2 gn with Advantys STB or CANopen communication modules.

	$-$ 110…240 V	V	$-$ 88…242	$-$ 88…242
Drop-out	$-$ 24 V	V	14.5	14.5
	$\sim$ 24 V	V	14.5	14.5
	$\sim$ or $-$ 48…72 V	V	29	29
	$\sim$ 110…240 V, $-$ 110…220 V	V	55	55
Typical consumption	$-$ 24 V	mA	130	220
I max while closing	$\sim$ 24 V	mA	140	220
	$\sim$ or $-$ 48…72 V	mA	280	280
	$\sim$ 110…240 V, $-$ 110…220 V	mA	280	280
I rms sealed	$-$ 24 V	mA	60	80
	$\sim$ 24 V	mA	70	90
	$\sim$ or $-$ 48…72 V	mA	35	45
	$\sim$ 110…240 V, $-$ 110…220 V	mA	35	25
Heat dissipation		W	2	3
Operating time	Closing	ms	24 V: 70; 48 V: 60; ≥ 72 V: 50	24 V: 70; 48 V: 60; ≥ 72 V: 50
	Opening	ms	35	35
Resistance to micro-breaks		ms	3	3
Resistance to voltage dips	IEC/EN 61000-4-11		At least 70 % of Uc for 500 ms	
Mechanical durability	In millions of operating cycles		15	15
Maximum operating rate	In operating cycles per hour		3600	3600
Main pole characteristics				
Number of poles			3	3
Isolation conforming to IEC/EN 60947-1	Possible		Yes	Yes
	Padlocking		1 padlock with Ø 6.9 mm shank	1 padlock with Ø 6.9 mm shank
Rated thermal current		A	12	32
Rated operational current (Ue ≤ 440 V)	Conforming to IEC/ EN 60947-2	Category AC-41	θ ≤ 70 °C: 12 A	θ ≤ 70 °C: 32 A
		Category AC-43	θ ≤ 70 °C: 12 A	θ ≤ 70 °C: 32 A
Rated operational voltage		V	690 (3)	690 (3)
Frequency limits	Of the operating current	Hz	40…60	40…60
Power dissipated in the power circuits	Operational current	A	3 6 9 12 18 25 32	
	Power dissipated in all three poles	W	0.1 0.3 0.6 1.1 2.4 4.6 7.5	
Rated breaking capacity on short-circuit		V	230 440 500 600	
		kA	50 50 10 4	
Total breaking time		ms	2 2 2	
Thermal limit	With Isc max on 440 V	kA²s	90	120

(1) d.c. voltage with maximum ripple of ± 10 %.
(2) No consumption sealed.
(3) For 690 V, use phase barrier LU9SP0.

TeSys motor starters - open version
TeSys U starter-controllers

1
Coordination

The standard defines tests at different levels of current; the purpose of these tests is to place the equipment in extreme conditions.

The standard defines 2 types of coordination, according to the condition of the components after testing: type 1 and type 2

Type 1 coordination requires that in a short-circuit condition, the contactor or starter must not present any danger to personnel or installations and must not be able to resume operation without repair or the replacement of parts.

The product combinations given below provide type 1 coordination

Soft start-soft stop unit/TeSysU starter controller combination with magnetic protection

| TeSys U / Altistart 48: type 1 coordination			
Power 400 V (kW)	TeSys U references (protection + power switching)	Soft start unit reference	
		Class 10	Class 20
5.5	LUB32 + LUCL32 or LUCL18	–	ATS48D17
7.5	LUB32 + LUCL32	ATS48D17	ATS48D22
11	LUB32 + LUCL32	ATS48D22	ATS48D32
15	LUB32 + LUCL32	ATS48D32	ATS48D38

Variable speed controller/TeSysU starter controller combination with magnetic protection

TeSys U / Altivar 21 UL Type 1/IP 20: type 1 coordination		
Power 400 V (kW)	TeSys U references (protection + power switching)	Variable speed controller reference
0.75	LUB12 + LUCL05	ATV21H075N4
		ATV21HU15N4
2.2	LUB12 + LUCL12	ATV21HU22N4
3	LUB12 + LUCL12	ATV21HU30N4
4	LUB12 + LUCL12	ATV21HU40N4
5.5	LUB32 + LUCL32 or LUCL18	ATV21HU55N4
7.5	LUB32 + LUCL32 or LUCL18	ATV21HU75N4
11	LUB32 + LUCL32	ATV21HD11N4
15	LUB32 + LUCL32	ATV21HD15N4

| TeSys U / Altivar 21 IP 54: type 1 coordination		
Power 400 V (kW)	TeSys U references (protection + power switching)	Variable speed controller reference
0.75	LUB12 + LUCL05	ATV21W075N4/N4C
1.5	LUB12 + LUCL12 or LUCL05	ATV21WU15N4/N4C
2.2	LUB12 + LUCL12	ATV21WU22N4/N4C
3	LUB12 + LUCL12	ATV21WU30N4/N4C
4	LUB12 + LUCL12	ATV21WU40N4/N4C
5.5	LUB32 + LUCL32 or LUCL18	ATV21WU55N4/N4C
7.5	LUB32 + LUCL32 or LUCL18	ATV21WU75N4/N4C
11	LUB32 + LUCL32	ATV21WD11N4/N4C
15	LUB32 + LUCL32	ATV21WD15N4/N4C

TeSys U starter-controllers

Variable speed controller/TeSysU starter controller combination with magnetic protection (continued)
TeSys U / Altistart 31: type 1 coordination

Power 400 V (kW)	TeSys U references (protection + power switching)	Variable speed controller reference
0.37	LUB12 + LUCL05	ATV31H037N4
0.55	LUB12 + LUCL05	ATV31H055N4
0.75	LUB12 + LUCL05	ATV31H075N4
1.1	LUB12 + LUCL12	ATV31HU11N4
1.5	LUB12 + LUCL12	ATV31HU15N4
2.2	LUB12 + LUCL12	ATV31HU22N4
3	LUB32 + LUCL18	ATV31HU30N4
4	LUB32 + LUCL18	ATV31HU40N4
5.5	LUB32 + LUCL32	ATV31HU55N4
7.5	LUB32 + LUCL32	ATV31HU75N4

TeSys U / Altistart 61: type 1 coordination

Power 400V (kW)	TeSys U references (protection + power switching)	Variable speed controller reference
0.75	LUB12 + LUCL05	ATV61H075N4
1.5	LUB12 + LUCL12	ATV61HU15N4
2.2	LUB12 + LUCL12	ATV61HU22N4
3	LUB32 + LUCL18	ATV61HU30N4
4	LUB32 + LUCL18	ATV61HU40N4
5.5	LUB32 + LUCL32	ATV61HU55N4
7.5	LUB32 + LUCL32	ATV61HU75N4

TeSys U / Altistart 71: type 1 coordination

Power 400V (kW)	TeSys U references (protection + power switching)	Variable speed controller reference
0.75	LUB12 + LUCL05	ATV71H075N4
1.5	LUB12 + LUCL12	ATV71HU15N4
2.2	LUB12 + LUCL12	ATV71HU22N4
3	LUB32 + LUCL18	ATV71HU30N4
4	LUB32 + LUCL18	ATV71HU40N4
5.5	LUB32 + LUCL32	ATV71HU55N4
